

# *Endura Stone Balustrade Systems*

## Ordering Information

### **Railings**

Endura Stone railings are divided into four styles. Railings vary in size and shape. Note that with the railing you select, there is a specific number of compatible balusters.

### **Balusters**

Based on the railing you select, you can determine which baluster to use as well. Where the Cambridge baluster is compatible with all railing styles, balusters like the Savannah are only compatible with one set of railings.

### **Newel Posts**

Endura Stone Balustrade Systems require a newel post every 15 feet. Rails are designed to butt into the sides of a wall, newel post, or column and not into each other. Railings attached to each other will not be covered under warranty.
